Stocking quantities vary by range

All of our static elements are constructed of 316 SST and electro-polished to a mirror finish. Each is stamped with its maximum operating pressure in psi. Accuracy of 0.5% of span. Can be overranged by 50% of calibrated span without changing calibration. Max allowable overpressure is 100% of calibrated span without damaging the element. Each comes complete with nut and ferrule to accept 1/8" pressure sensing tube. Ranges over 10,000psig include an integral pressure sensing tube and accept autoclave fittings for extreme pressures. These static elements will fit directly into the following recorders:

Barton, PMC, COE, Natco, Clif Mock

Please call to discuss our other recorder supplies including: differential pressure units (bellows repair—one of only three in-house facilities in North America), temperature elements, leveling saddles, charts and pens, chartdrives, thermowells
